Departmental Organization, 1947-2001

Congress, when considering proposals to establish a Department of Homeland Security, studied the histories of other major federal agencies and departments as possible templates for structures and administrative policies that worked and those that required adjustment.

The tables that follow offer selected basic information common to all the departments¹ created since the end of World War II. For each, **Table 1** provides a citation to the enabling legislation, on-board staffing as it was established and as of September 30, 2001, the budget for the first fiscal year, the estimated budget for FY2003 and the FY2004 request, brief information on the authorities or responsibilities moved to the department in the organic act from other federal entities, and a statement on the new authorities or responsibilities added by the organic act. **Table 2**, while also including the enabling citations, provides the name of the first secretary, holdover status, nomination and confirmation dates, and the time lapse between Senate receipt of the nomination and confirmation action.

Following the tables is an organizational flow chart presenting the history of agency movement before and during the creation of the Department of Energy.

¹In order of creation: Department of Defense; Department of Health, Education, and Welfare; Department of Housing and Urban Development; Department of Transportation; Department of Energy; Department Health and Human Services; Department of Education; Department of Veterans Affairs, and Department of Homeland Security.
